CKD cant be cured, but can be reduced by certain changes in lifestlye

Lifestyle
changes to
help you stay
as healthy as
possible

Hemodialysis isn't a cure for kidney failure, but it can help you feel better and live longer.

Hemodialysis is a dialyzer which uses a machine with a mechanical filter to help cleanse your blood.

Medicine – to control associated problems, such as high blood pressure and high cholesterol

High blood pressure medications.

If ones kidneys don't work well anymore, they'll need dialysis to do their job.

Continuous
ambulatory
peritoneal dialysis:
This usually happens
while a person goes
about their daily
activities.

A proper diet is a vital part of kidney failure treatment.

Reduce daily salt and fluid intake, including fluids in food such as soups and yoghurts, to help reduce the swelling.
